Carpenters Safe Practices

General Area or Specific Job Safety Class _____________________________________________

Date Prepared   ____/____/____
Preparer    _________________________________

Safe Workplace Conditions

• Portable power saw blade upper half must be permanently guarded; bottom half must have a hinged guard.

• Radial arm and table saws must have anti-kickback devices installed.

• Exposed saw teeth must be covered by hoods or guards.

• Radial arm saws must not pass the front edge and return to the table back when released.

• Safety devices must be installed on all pneumatic nailers and staplers operating at over 100 psi.

Safe Work Practices

• Employees must be trained in proper saw use and safety before working unsupervised.

• Employees must not block off or remove any guard or safety device.

• Employees must disconnect pneumatic tools from air supplies when not in use.

• Employees must not operate a pneumatic tool within 10 feet of another worker.

Personal Protective Equipment

• Safety glasses with side shields must be worn at all times.
